

Testing Task 2

TYPED_TEST

Requirements:

Implement a **template queue class** that stores **any data type** with the following functions:

- push(T value)
- Pop()
- size()
- *you can add other methods to make it behave like the official queue in STL.*

After implementing the queue start testing it using Gtest and test **typed test** to define a class for testing instead of manually writing tests for each data type.

here is a link for more information:
